*3rd Year CSE: 5th Semester*

Assignment - 3: Lexer for tinyC

Marks: 100

Assign Date: September 02, 2019

Submit Date: 23:55, September 15, 2019

## 1 Preamble – tinyC

This assignment follows the lexical specification of C language from the International Standard **ISO/IEC 9899:1999 (E)**. To keep the assignment within our required scope, we have chosen a subset of the specification as given below. We shall refer to this language as **tinyC** and subsequently (in a later assignment) specify its grammar from the **Phase Structure Grammar** given in the C Standard.

The lexical specification quoted here is written using a precise yet compact notation typically used for writing language specifications. We first outline the notation and then present the Lexical Grammar that we shall work with.

## 2 Notation

In the syntax notation used here, syntactic categories (non-terminals) are indicated by *italic type*, and literal words and character set members (terminals) by **bold type**. A colon (:) following a non-terminal introduces its definition. Alternative definitions are listed on separate lines, except when prefaced by the words "one of". An optional symbol is indicated by the subscript "opt", so that the following indicates an optional expression enclosed in braces.

$\{ \textit{expression}_{opt} \}$

## 3 Lexical Grammar of tinyC

### 1. Lexical Elements

*token:*

*keyword*  
*identifier*  
*constant*  
*string-literal*  
*punctuator*

### 2. Keywords

*keyword:* one of

<b>auto</b>	<b>enum</b>	<b>restrict</b>	<b>unsigned</b>
<b>break</b>	<b>extern</b>	<b>return</b>	<b>void</b>
<b>case</b>	<b>float</b>	<b>short</b>	<b>volatile</b>
<b>char</b>	<b>for</b>	<b>signed</b>	<b>while</b>
<b>const</b>	<b>goto</b>	<b>sizeof</b>	<b>_Bool</b>
<b>continue</b>	<b>if</b>	<b>static</b>	<b>_Complex</b>
<b>default</b>	<b>inline</b>	<b>struct</b>	<b>_Imaginary</b>
<b>do</b>	<b>int</b>	<b>switch</b>	
<b>double</b>	<b>long</b>	<b>typedef</b>	
<b>else</b>	<b>register</b>	<b>union</b>	

### 3. Identifiers

*identifier:*

*identifier-nondigit*  
*identifier identifier-nondigit*  
*identifier digit*

*identifier-nondigit*: one of

-	a	b	c	d	e	f	g	h	i	j	k	l	m
	n	o	p	q	r	s	t	u	v	w	x	y	z
	A	B	C	D	E	F	G	H	I	J	K	L	M
	N	O	P	Q	R	S	T	U	V	W	X	Y	Z

*digit*: one of

0	1	2	3	4	5	6	7	8	9
---	---	---	---	---	---	---	---	---	---

#### 4. Constants

*constant*:

- integer-constant*
- floating-constant*
- enumeration-constant*
- character-constant*

*integer-constant*:

- nonzero-digit*
- integer-constant digit*

*nonzero-digit*: one of

1	2	3	4	5	6	7	8	9
---	---	---	---	---	---	---	---	---

*floating-constant*:

- fractional-constant exponent-part<sub>opt</sub>*
- digit-sequence exponent-part*

*fractional-constant*:

- digit-sequence<sub>opt</sub> . digit-sequence*
- digit-sequence .*

*exponent-part*:

- e** *sign<sub>opt</sub> digit-sequence*
- E** *sign<sub>opt</sub> digit-sequence*

*sign*: one of

+	-
---	---

*digit-sequence*:

- digit*
- digit-sequence digit*

*enumeration-constant*:

- identifier*

*character-constant*:

- '** *c-char-sequence* **'**

*c-char-sequence*:

- c-char*
- c-char-sequence c-char*

*c-char*:

- any member of the source character set except  
the single-quote **'**, backslash **\**, or new-line character
- escape-sequence*

*escape-sequence*: one of

<b>\</b> '	<b>\</b> "	<b>\</b> ?	<b>\</b> \
<b>\</b> a	<b>\</b> b	<b>\</b> f	<b>\</b> n
<b>\</b> r	<b>\</b> t	<b>\</b> v	

#### 5. String literals

*string-literal*:

- "** *s-char-sequence<sub>opt</sub>* **"**

*s-char-sequence*:

- s-char*
- s-char-sequence s-char*

*s-char*:

- any member of the source character set except  
the double-quote **"**, backslash **\**, or new-line character
- escape-sequence*

## 6. Punctuators

*punctuator*: one of

```
[ ] ( ) { } . ->
++ -- & * + - ~ !
/ % << >> < > <= >= == != ^ | && ||
? : ; ...
= *= /= %= += -= <<= >>= &= ^= |=
, #
```

## 7. Comments

### (a) *Multi-line Comment*

Except within a character constant, a string literal, or a comment, the characters `/*` introduce a comment. The contents of such a comment are examined only to identify multibyte characters and to find the characters `*/` that terminate it. Thus, `/* ... */` comments do not nest.

### (b) *Single-line Comment*

Except within a character constant, a string literal, or a comment, the characters `//` introduce a comment that includes all multibyte characters up to, but not including, the next new-line character. The contents of such a comment are examined only to identify multibyte characters and to find the terminating new-line character.

## 4 The Assignment

1. Write a flex specification for the language of `tinyC` using the above lexical grammar. Name of your file should be `ass3_roll.l`. *The `ass3_roll.l` should not contain the function `main()`.*
2. Write your `main()` (in a separate file `ass3_roll.c`) to test your lexer.
3. Prepare a Makefile to compile the specifications and generate the lexer.
4. Prepare a test input file `ass3_roll_test.c` that will test all the lexical rules that you have coded.
5. Prepare a tar-archive with the name `ass3_roll.tar` containing all the above files and upload to Moodle.

## 5 Credits

1. Flex Specifications: **60**
2. Main function and Makefile: **20** [15+5]
3. Test file: **20**
